

FMU5X, FMC5X, FMU5Z, FMC5Z Multifamily Ceiling Mount Fan Coils for Puron Advance™ (R-454B) Refrigerant Sizes 18 To 36, 1-1/2 To 3 Nominal Tons

Product Data

NOTE: Read the entire instruction manual before starting the installation.

MULTIFAMILY CEILING MOUNT FAN COIL

- FMU5Z and FMC5Z 1-1/2, 2, 2-1/2, and 3 Tons
- FMU5X and FMC5X 1-1/2, 2, 2-1/2, and 3 Tons

All Models

- Horizontal application only
- Accessory field-installed electric heat kits available in 3, 5, 6, 7.5, or 10 kW
- 40VA, 208/230V-1-60 transformer
- All models use Puron Advance™, R-454B refrigerant and have a hard-shutoff TXV metering device
- Adjustable condensate drain pan

FM(C,U)5X, FM(C,U)5Z

- Horizontal return applications require field fabricated bottom cover
- Cabinets meet the requirement of 1.4% cabinet leakage rate when tested to ASHRAE Standard 193
- Cabinets insulated to prevent cabinet sweating
- Refrigerant lines and electrical connections can be run out the back or side of casing

Performance

- PSC motor on all FMU5X & FMC5X models
- ECM motor on all FMU5Z & FMC5Z models

Easy To Install Service

- A-coil design for maximum surface area
- Multiple electrical, refrigerant lineset and drain line entry for application flexibility
- Primary and secondary drain connections exit from the back or side of the cabinet
- Supports furred-down ceiling open return and ducted return applications
- Sweat connections for long term reliability
- Grooved aluminum tube / aluminum fin coils on FMU5X, FMC5X, FMC5Z, and FMU5Z models with “AL” in the 10th & 11th position

ISO 9001
CERTIFIED SYSTEM

Use of the AHRI Certified™ Mark indicates a manufacturer's participation in the program. For verification of certification for individual products, go to www.ahridirectory.org.

WARRANTY

- Default 5-year parts limited warranty:
 - 10-year parts limited warranty with timely registration*.Equipment must be registered within 90 days of original installation, except in jurisdictions where warranty benefits cannot be conditioned on registration.
- * Applies to original purchaser/homeowner and not available to subsequent owners, except in jurisdictions where laws dictate otherwise.

See Warranty certificate for complete details and restrictions.

■ - Shaded boxes represent airflow outside the required 300-450 CFM/ton.
 1. Factory default taps are for performance ratings with single stage R-454B HP. For ACs, refer to the airflow details available on AHRI website and adjust tap accordingly.

■ - Shaded boxes represent airflow outside the required 300-450 CFM/ton.
 1. Airflow data is without filter or electric heat accessory. Heater adds 0.05 -in. static.
 2. Use wet coil data for determining cooling airflow
 3. Accessory louver panel adds 0.05 -in. Static.
 4. When electric heater is working only, 300CFM for each ton is sufficient except 30K work with 10KW heat (≈900SCFM)
 5. Factory default taps are for performance ratings with single stage R-454B HP. For ACs, refer to the airflow details available on AHRI website and adjust tap accordingly.

Table 7 – Required CFM Range

Size	CFM	
	Min	Max
18	450	675
24	600	900
30	750	1125
36	900	1350

PERFORMANCE DATA (cont.)

Table 9 – SENSIBLE CAPACITY (SHC) CORRECTION FACTOR

BYPASS FACTOR	ENTERING AIR DRY-BULB TEMPERATURE (°F)					
	79	78	77	76	75	Under 75
	81	82	83	84	85	Over 85
	ENTERING AIR DRY-BULB TEMPERATURE (°C)					
	26	25	25	24	24	Under 75
	27	28	28	29	29	Over 85
Correction Factor						
0.10	.098	1.96	2.94	3.92	4.91	Use formula shown below
0.20	0.87	1.74	2.62	3.49	4.36	
0.30	0.76	1.53	2.29	3.05	3.82	

Interpolation is permissible.. Correction Factor = 1.09 x (1 - BF) x (db - 80).

NOTES:

1. Contact manufacturer for cooling capacities at conditions other than shown in table.
2. Formulas:
 Leaving db = entering db - $\frac{\text{sensible heat cap.}}{1.09 \times \text{CFM}}$
 Leaving wb = wb corresponding to enthalpy of air leaving coil (h_{1wb})
 $h_{1wb} = h_{ewb} - \frac{\text{total capacity (Btuh)}}{4.5 \times \text{CFM}}$
 where h_{ewb} = enthalpy of air entering coil. Direct interpolation is permissible.
 Do not extrapolate.
3. SHC is based on 80°F (27°C) db temperature of air entering coil.
 Below 80°F (27°C) db, subtract (Correction Factor x CFM) from SHC.
 Above 80°F (27°C) db, add (Correction Factor x CFM) to SHC.
4. Bypass Factor = 0 indicates no psychometric solution.
 Use bypass factor of next lower EWB for approximation.

Table 10 – ESTIMATED SOUND POWER LEVEL (dBA)
