Reach New Heights with Carrier® VRF

Whether it's for residential, light commercial or larger commercial buildings, Carrier offers a full line of Ductless & VRF comfort solutions for a host of applications, combining top performance, comfort and energy efficiency across the board. From chillers to rooftop systems, get the solutions you need from one convenient, trusted source: your Carrier distributor.

Dedicated to Quality

The legacy of innovation at Carrier dates back to 1902, when Willis Carrier created an “Apparatus for Treating Air” for a Brooklyn, N.Y., printing plant. The ingenious comfort system would become known as the first modern-day air conditioner and forever change the way we live and work indoors.

From the first centrifugal chiller to the first air-conditioned skyscraper, the Carrier® Corporation continues to advance its founder’s commitment to comfort with a company-wide attention to detail. Willis Carrier’s focus still resonates through every stage of the development process, from design to user field tests, and is apparent today in VRF technology from Carrier.

Comfort Where It's Needed

VRF (Variable Refrigerant Flow) technology is an innovative indoor comfort system designed to provide superior zoning flexibility. VRF systems can connect up to 48* indoor units to a single outdoor condensing unit. Each indoor unit can be independently controlled by varying the refrigerant flow and, in doing so, varying capacity delivered to each zone – making it one of the most effective and efficient systems available.

The system also allows indoor units connected to the same outdoor unit to independently cool and heat through the use of a heat recovery system. The result is remarkably efficient performance that minimizes energy loss and makes optimal use of zone-specific temperature control.

Save Space

VRF systems provide several installation advantages by eliminating the need to install large distribution fans, water pumps and large pipes. VRF systems do not require dedicated maintenance rooms or service shafts, freeing up valuable space in the buildings where they're installed.

Easier Installation

In addition to featuring a smaller footprint, Carrier® VRF systems are easy to install and operate, while fully leveraging all of the advantages of VRF – combining energy savings, application flexibility and long-term reliability – to deliver the indoor comfort solutions you need.

* Heat recovery.

Intelligent Comfort Solutions

SHRM-i and SMMS-i systems feature innovative technologies that allow Toshiba Carrier to deliver a superior combination of high-efficiency, flexibility and comfort.

SHRM 
SUPER HEAT RECOVERY MULTI

SMMS 
SUPER MODULAR MULTI SYSTEM

TOSHIBA

Carrier

Efficiency

The Toshiba Carrier VRF system offers innovations in energy efficiency in part by combining advanced, vector-controlled inverters with multiple high-efficiency rotary compressors.

Flexibility

Toshiba Carrier systems provide impressive installation flexibility with the ability to connect up to 48* indoor units to one outdoor unit. They also offer industry-leading flexibility in piping configuration – up to 720** feet long and up to 130*** feet high.

* Heat recovery.

** Outdoor unit to farthest indoor unit: heat pump.

*** Between the lowest and highest indoor unit: heat pump/heat recovery.

Comfort

Toshiba Carrier systems with intelligent VRF ensure precise control over temperature in every zone in the building, regardless of the distance between the fan coil and the outdoor unit.

Simultaneous Heating and Cooling

Flexible Refrigerant Flow

Heat recovery systems or SHRM-i allows heating and cooling from each indoor unit on a single refrigerant piping system, maximizing user comfort and system efficiency.

More Efficient Heat Recovery Operation Than Individual Heating and Cooling Only

SHRM-i achieves the highest energy efficiency when both heating and cooling are provided simultaneously, as recovered energy from one zone is reused in another. Highest efficiencies are achieved when heating and cooling capacities are near equal.

Connection cable kit (RBC-CBK15FUL) is required.

Long Piping From Flow Selector Unit

The flow selector can be easily installed in common areas such as hallways.

World-Leading Performance

Toshiba Carrier VRF combines multiple variable-speed compressors with vector-controlled inverters to achieve greater operating performance under partial loads. The 8- and 10-ton outdoor units incorporate three compressors per unit, while the 6-ton model uses two to achieve full performance. These compressors improve both energy efficiency and comfort when compared to standard, non-inverter systems.

High-performance outdoor units with three compressors and three inverters

Fast, Load-Matching Control

Each compressor is controlled with a dedicated inverter board that taps the compressor's full potential. This combination helps achieve precise control over the system for load matching and smoother compressor operation.

Variable-Speed Operation

Continuous, inverter-driven operation reduces energy consumption compared to standard systems. The system determines which heat exchanger can be used most efficiently while delivering the power required. Occupants enjoy a more comfortable indoor environment with balanced temperatures from room-to-room, because compressor speeds adjust in nearly seamless 0.1 Hz steps. Responding precisely to the capacity needs of the space, this responsive operation minimizes energy loss when changing frequencies.

Inverter-Driven Compressor

Toshiba Carrier compressors include optimized discharge port positioning and blade thickness to reduce compression loss and friction resistance. Rotor magnets with large surface areas and slit designs achieve greater efficiency and reduce noise.

Magnetic Rotor

Each motor employs a compact and powerful rare earth magnetic rotor and features reduced eddy-current loss.

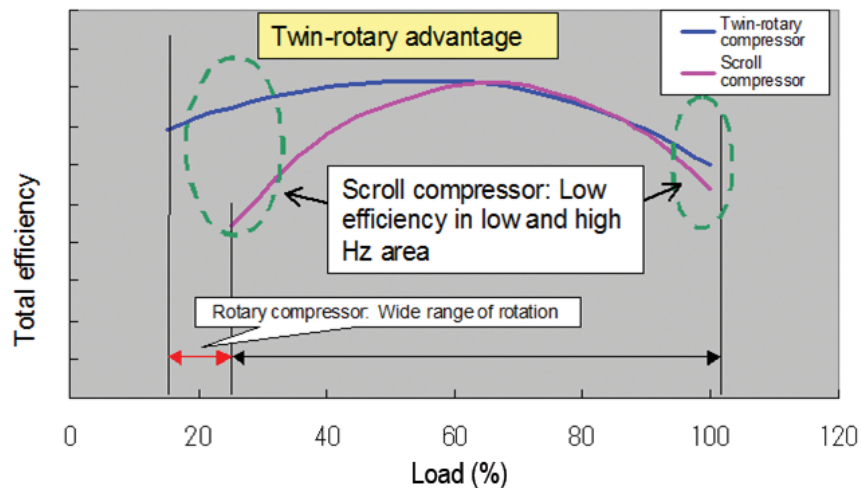

Smooth Sine Curve

The fast-calculating vector-controlled inverter quickly converts current into a smooth sine curve. This translates into smoother operation of the compressor's DC motor and improved operating efficiency.

High-Efficiency Inverter-Driven Compressors

Outdoor units can utilize up to three inverter-driven compressors, each of which has both a wider and flatter efficiency curve.

Reliability

With dual-rotation, the load is distributed more evenly – this means that the operating sequence of the individual compressors is rotated, balancing their operating hours.

The use of inverters reduces the risk of compressor failure, in part because power surges are eliminated. Over- or under-utilization of power, typical for non-inverter compressors, is also eliminated. And, there is no on/off power surge as the system adjusts to the demand required by the occupant or system.

Energy Savings

During operation, the system determines which heat exchanger can be used most efficiently and selects the compressor to deliver the power required. Inverter systems save energy as continuous operation offers the same capacity with lower power consumption. This benefits all occupants by maintaining more-even room temperatures, as well as reducing energy consumption.

Long Pipe Length for Greater Flexibility

With Toshiba Carrier VRF systems, layouts can be designed with a maximum equivalent distance of up to 720 feet. This leads to fewer limitations, making it much easier to design for floors with many small rooms, or for tenants who often rearrange their floor layouts. Y-shaped branching joints on the gas pipes between outdoor units ensure that refrigerant flow is equalized to each branch for enhanced system reliability.

Coverage achieved by a single-system

* Heat pump model. Farthest equivalent length on heat recovery is 640 ft.
† First branch piping length on heat recovery is 215 ft.

Greater Support for Height Differences Between Indoor Units

Toshiba Carrier VRF systems lead the industry with support for height differences of up to 130 feet between indoor units on a single-system. For instance, in an 11-story* building, this is enough height to fully cover the entire floor as well as corridors and common spaces.

* Calculated at 11.5 ft per floor.
† Heat pump model.
Heat recovery maximum is 165 ft.

Smaller Footprint, Easier Handling and Installation

The compact outdoor units provide installation flexibility. Units can even be transported to a roof via elevator. Installations are quicker and easier and boast fewer weight-related restrictions. All of this convenience comes with no drop in quality. VRF delivers the performance you've come to expect from Carrier®.

Square Carrying Holes

When a crane is needed to transport the unit, square carrying holes in the lower corners of the outdoor unit ensure safer, surer lifting. Belts passing through the holes maintain positioning and load balance throughout the lifting operation.

Intelligent VRF Control

Toshiba Carrier systems with intelligent VRF control provide levels of comfort other systems simply cannot match. That's because differing pipe lengths in commercial buildings result in inconsistent levels of performance, especially when several indoor units are connected to a system. This imbalance is caused by pressure loss and thermal leaks that inhibit the optimum refrigerant flow to each indoor unit.

Without intelligent VRF control, refrigerant flows unevenly, typically oversupplying areas closer to the outdoor unit while undersupplying those that are farther away.

Total System Control

Toshiba Carrier intelligent VRF control overcomes many typical performance issues by providing precise control of up to 40* indoor units with just electrical wiring and copper refrigerant tubing. It's a smarter system, sending refrigerant to the areas that need it, while supplying less refrigerant to areas that don't.

Consistent Room-to-Room Temperature

Balanced comfort is achieved regardless of line length, allowing occupants to enjoy consistent performance in spite of how close they are to the outdoor unit. Toshiba Carrier VRF systems monitor the flow of refrigerant to each indoor unit while tracking each model. The system adjusts for pressure losses by pipe length between the outdoor unit and each indoor component, as well as operating conditions. It computes the amount of refrigerant required by each indoor unit and controls the unit's pulse motor valve to ensure optimal supply across the system.

*Heat recovery models.

With intelligent VRF control

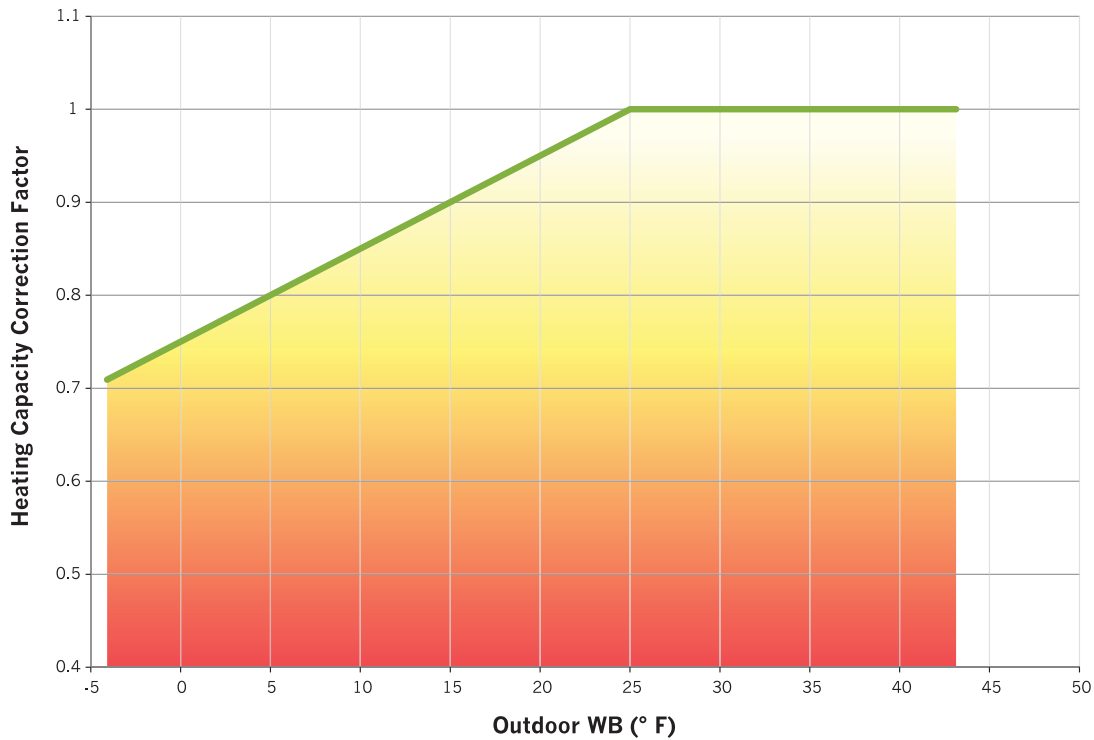

With intelligent VRF control, Toshiba Carrier delivers consistent, room-to-room comfort across several floors of a commercial structure.

High Heat Setting

The Toshiba Carrier VRF system can handle heating down to -4° F with 70% capacity. An extended operation range of the compressor was achieved by upgrading the software which gives better heating capacities at lower ambient conditions. This was accomplished with no additional modifications to the current product line. The high heating mode is available by setting the dip switch on the interface PCB of the outdoor unit:

- Dip switch “SW10-1” must be set to ON
- Placement of the dip switch “SW10” of the interface PCB

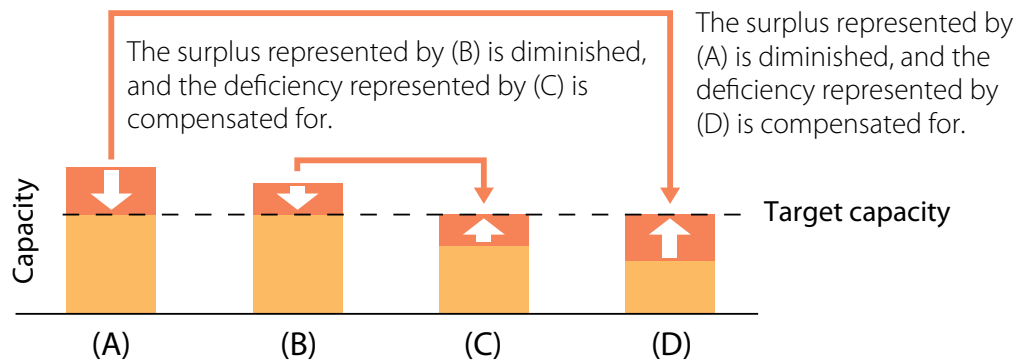

Outdoor Ambient Heating Capacity Correction (High Heat Setting)

Precise Refrigerant Flow

One of the keys to delivering precision refrigerant flow and enhanced comfort is the Toshiba Carrier pulse modulating valve (PMV) control. The PMV control prevents refrigerant from flowing to indoor units that are not operating. The system reduces bypass loss and achieves tighter control over the compressor capacity of the outdoor unit.

(*1) Rated conditions

Cooling: Indoor 80° F Dry Bulb/67° F Wet Bulb, Outdoor 95° F Dry Bulb.
Heating: Indoor 70° F Dry Bulb, Outdoor 47° F Dry Bulb/43° F Wet Bulb.

The standard pipe

144 type – 240 type	Equivalent piping length: 50 ft, Height difference: 0 ft
---------------------	--

(*2) The source voltage must not fluctuate more than ±10%

(*3) The amount does not consider extra piping length. Refrigerant must be added on site in accordance with the actual piping length.

(*4) Select wire size based on the larger value of MCA

MCA: Minimum Circuit Amps (Minimum Circuit Amps required for power supply design)

(*5) MOCP: Maximum Overcurrent Protection (Amps)

Heat Pump Outdoor Units – 208/230V

Appearance

Options

Compact 4-Way Cassette

MMU-AP*1MH2UL**

Perfect for Grid System Ceiling

This compact unit fits perfectly into ceilings and matches standard architectural modules to virtually eliminate the need to cut ceiling tiles.

Designed for Simple Installation and Easy Maintenance

- Slim design is only 10.6 inches in height even when an electrical box is located inside the unit
- Installation is easy using the panel adjust pocket; use the “adjust pocket” function for fine adjustments after installation
- Available for ceilings up to 11.5 feet in height†
- Drain-checking hole makes it possible to check the drain pan through the side case

RBC-UM11PG(W)UL

Drain-checking hole

Maximum height

†8.1 ft on AP007 and AP009

Underceiling

Comfortable Ambience

- Quiet: New design reduces noise level to half that of conventional units
- Louver control: Airflow angle is automatically set to the most suitable setting according to cooling or heating needs; an automatic swing mode enables airflow to reach all areas of the room to create a comfortable ambience

	Y-shape Branching Joint for Using 2 Pipes				Branch Headers				Outdoor Unit Connection Piping Kit	
Appearance					 (4-Branch Headers)					
Model name	RBM-BY55UL	RBM-BY105UL	RBM-BY205UL	RBM-BY305UL	RBM-HY1043UL	RBM-HY2043UL	RBM-HY1083UL	RBM-HY2083UL	RBM-BT14UL	
Usage (kBTU/h) *Classification according to indoor unit capacity code	Total below 61	Total 61 or more and below 134.5	Total 134.5 or more and below 239	Total 239 or more	Max. 4 branches		Max. 8 branches		All	
					Below 136	136 or more	Below 136	136 or more		

Remote Controls

Touch Screen Controller BMS-CT5120UL

- Grouping based on floor, unit, area, tenant and level
- Operating Mode, Turning ON/OFF
- Enable or Disable local Remote Control
- Master Scheduler – Weekly, Five Special Days, Monthly
- Display alarm + provide history for alarms
- Web Browser Monitoring and Control (for Intranet PC)
- Up to two concurrent users can be connected
- Additional digital I/O device available
- Maximum of 512 indoor unit per Touch Screen Controller
- Selectable display language – English / French / Spanish

Lite-Vision Plus Remote Controller RBC-AMS51E-ES

- Clock display and schedule timer
- Backlit local control of individual fan coil
- 1°F temperature indication
- Set temperature range limiting

Smart Manager

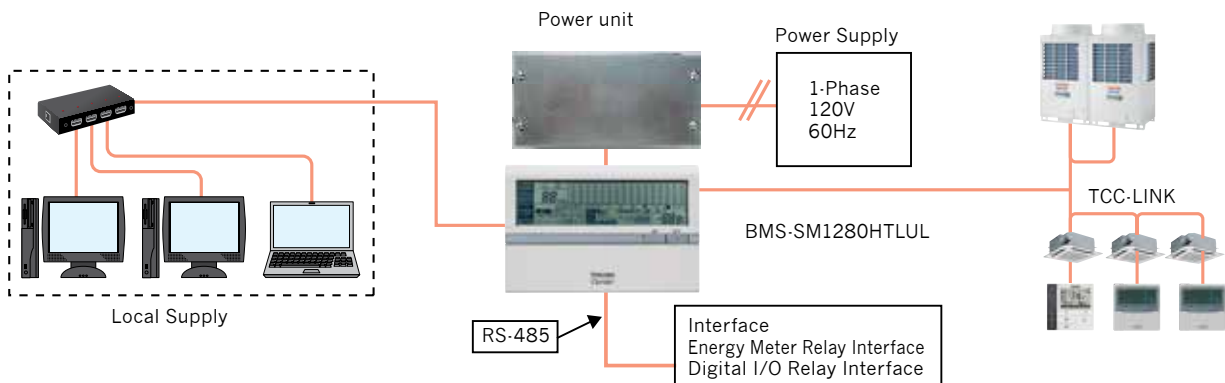

Smart Manager BMS-SM1280HTLUL

- List View available – Displays all indoor units in one screen
- Set View available – Shows basic indoor unit settings on main screen
- Advanced operation and master schedule functions available
- Up to four concurrent users can be connected
- Up to 32 user accounts can be programmed with different levels of access (at least one must be administrator level)
- Energy monitoring and report creation functions available
- Advanced operation and master schedules can be set on a calendar
- Additional Digital I/O device available
- Thin profile controller and separate power supply unit enables easy installation

Central Remote Control BMS-CM1281TLUL

- Individual control (ON/OFF, Operating mode, etc.)
- Manages up to 128 units (Max: 2 x 64 indoor units)
- Flexible grouping in zones
- External input/output control (Input: ON/OFF signal, Output: Error signal)

Network Control

BACnet® System

**Intelligent Server
BMS-LSV6UL**

**BACnet® Server Software
BMS-STBN10UL**

**TCS-NET Relay Interface
BMS-IFLSV4UL**

BACnet®

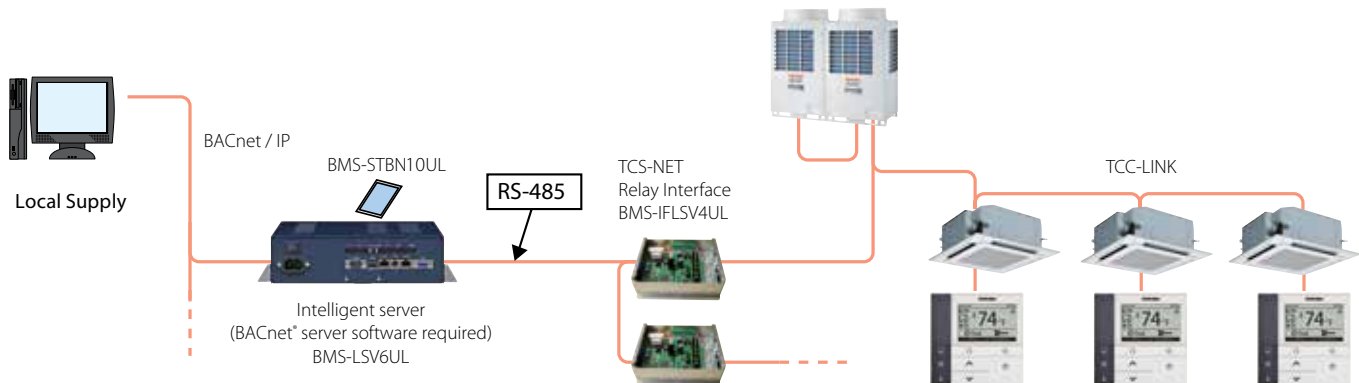

The BACnet® system operates in conjunction with the BACnet server. Server uses object signals to provide the following functions:

Controller

- ON/OFF
- Operation mode
- Temperature setting
- Fan speed
- Louver
- Permit/prohibit local remote controller

Monitoring

- ON/OFF
- Operation mode
- Temperature setting
- Fan speed
- Louver
- Room temperature
- Permit/prohibit local remote controller
- Error code
- Error status

BACnet®: Trademark registration of American Society of Heating, Refrigerating and Air Conditioning Engineers, Inc.
Integration done in field by customer.

Network Control

LonWorks®

**LN Interface
TCB-IFLN642TLUL**

LonWorks® LN Interface

The LonWorks® interface manages the SMMS-i/SDI air conditioning system as a Lon device to communicate with the customer's Building Management System and to monitor operational status. A maximum of 64 units are controllable per interface.

SNVT Signal

Signals and provides the following functions:

Controller

- ON/OFF
- Operation mode
- Temperature setting
- Fan speed
- Louver
- Permit/prohibit local remote controller

Monitoring

- ON/OFF
- Operation mode
- Temperature setting
- Fan speed
- Louver
- Room temperature
- Permit/prohibit local remote controller
- Error code
- Error status

LonWorks®: Registered trademark of Echelon corporation.

Integration done in field by customer.

Additional Remote Controls

**Simple Wired Remote Control
RBC-AS41UL**

- Start/Stop
- Temperature setting
- Airflow changing
- Check code display

**Remote Sensor
TCB-TC41LUL**

Install this sensor when outside air has been introduced or when overcooling and overheating are to be minimized.

**Wired Remote Controller
RBC-AMT32UL and RBC-AMS41UL**

- Local control of individual fan coil
- Clock display and schedule timer

(RBC-AMS41UL only):

- Possible to program schedule timer (seven-day timer) function
- Possible to program eight functions for each day of the week

The following items can be set in program: operation time, operation start/stop, operation mode, temperature setting, restriction on button operation

Additional Remote Controls

Stand-Alone Receiver TCB-AX32UL

- (For 4-Way Cassette, Compact 4-Way Cassette, Underceiling, Concealed Duct, Slim Duct, Vertical AHU)
- Includes Wireless Remote Control Kit

Integral Receiver RBC-AX33C-UL

- (For Underceiling)
- Includes Wireless Remote Control Kit

Additional Remote Controls

Wireless Remote Control Kit

- Start/Stop
- Changing mode
- Temperature setting
- Airflow changing
- Timer function
- Control by two remote controllers is available
 - Two wireless remote controllers can operate one indoor unit
 - The indoor unit can then be operated separately from the two different locations
- Check code display

Integral Receiver RBC-AX32U(W)-UL (For 4-Way Cassette)

- Includes Wireless Remote Control Kit

Application Control

TCB-PCDM4UL

Size: 2.8 × 3.3 (in.)

Install the optional P.C. board in the inverter assembly of the outdoor header unit.

Power Peak-Cut Control

- Feature
The upper limit capacity of the outdoor unit is restricted based on the outdoor power peak selected setting.
- Function
Two control settings are selectable by setting SW07 on the interface P.C. board on the header outdoor unit.

TCB-PCMO4UL

Size: 2.2 × 2.4 (in.)

Install the optional P.C. board in the inverter assembly of the outdoor header unit.

External Master ON/OFF Control

- Feature
The outdoor unit can control start or stop to receive the external signal.

Night Operation Control

- (Sound reduction)
- Feature
Sound level can be reduced by restricting the compressor and fan speeds.

Operation Mode Selection Control

- Feature
This control can restrict the selectable operation mode.

Snowfall Fan Control

- Feature
The outdoor fan will operate to prevent snow buildup.

TCB-PCIN4UL

Size: 2.9 × 3.1 (in.)

Install the optional P.C. board in the inverter assembly of the outdoor header unit.

Error/Operation Output Control

- Feature
Enables external output of error and operation signals.

Compressor Operation Output

- Feature
Enables external signal output for each compressor that is in operation within any given outdoor unit. This feature provides a practical method for calculating total operating times for each compressor.

Operating Rate Output

- Feature
External output of system operating rates enables remote monitoring of operating conditions.

TCB-IFCB-4UL

Size: 7.9 × 6.7 × 2.6 (in.)

Remote Location ON/OFF Control Box

- Feature
Start and stop of the air conditioner is possible by an external signal and indication of operation/alarm externally.

Monitoring

ON/OFF status (for indoor unit).
Alarm status (system and indoor unit stop).
ON/OFF command.
Air conditioner can be turned ON/OFF by the external signals.
The external ON/OFF signals will initiate the signals shown below.

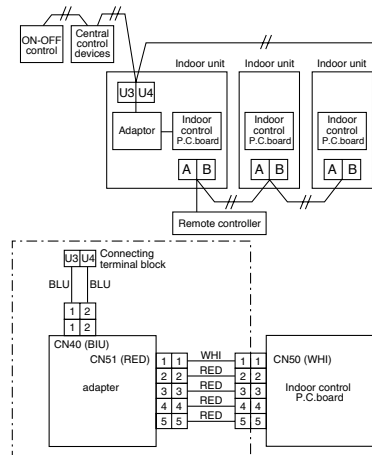

TCB-PCNT31TLUL

Size: 3.3 × 2.0 (in.)
Install optional P.C. board in E-parts of the indoor unit.

Network Adapter

- Feature
Link adapter for “1:1 model” to enable connection to VRF system network.
1:1 model:
– Super digital inverter
– Used only for light commercial products

Notice: Toshiba Carrier is committed to continuously improving its products to ensure the highest quality and reliability standards, and to meet local regulations and market requirements. All features and specifications are subject to change without prior notice.
